

$$\begin{array}{r} -14 \\ 7 \end{array}$$

Divide 11110010 by 00000111

dividend is in 2's complement representation and divisor is in true form. the answer (quotient) will be the negative number.

convert Dividend to true form.

$$\begin{array}{c} 1111010 \\ \hline -14 \end{array} \longrightarrow \begin{array}{c} 00001110 \\ \hline +14, \text{ we will use this} \end{array}$$

To ~~add~~ subtract divisor, we add in complement form.

$$\begin{array}{c} 00000111 \\ \hline +7 \\ \hline \end{array} \longrightarrow \begin{array}{c} 11111001 \\ \hline -7 \end{array}$$

00001110		q = 00000000
+ 11111001		q = 00000000
<hr/>		q = 00000001
10000011		
+ 11111001		
<hr/>		q = 00000010
10000000		

remainder = 0

q = 00000010

Remember, the result (q) should be ~~the~~ negative therefore

$$\begin{array}{c} 00000010 \\ \hline +2 \end{array} \longrightarrow \begin{array}{c} 11111110 \\ \hline -2 \end{array}$$

Answer: 1111110₂

-21
-3

 Divide 11101011 by 11111101

The result will be positive.

Dividend 11101011 \rightarrow 00010101

00010101	q = 00000000
+ 11111101	
100010010	q = 00000001
+ 11111101	
100001111	q = 00000010
+ 11111101	
100001100	q = 00000011
+ 11111101	
100001001	q = 00000100
+ 11111101	
100000110	q = 00000101
+ 11111101	
100000011	q = 00000110
+ 11111101	
100000000	q = 00000111

Since the answer should be positive,
 q = 00000111₂

$$\begin{array}{r} -21 \\ 3 \end{array}$$

Divide 11101011 by 00000011

the result will be negative.

repeating the same procedure

$$\begin{array}{r} 00010101 \\ + 11111101 \\ \hline \end{array}$$

$100000000 \quad q = 00000111$

Since, the answer is negative we convert 90 into complement form.

$$\begin{array}{r} \text{00000111} \rightarrow \text{11111001} \\ \hline +7 \qquad \qquad -7 \end{array}$$

$$a_v = 11111001_2$$

$$\frac{22}{7}$$

Divide 00010110 by 00000111

The answer will be a positive number

00000111 \rightarrow 1111001

$$\begin{array}{r}
 00010110 \\
 + 11111001 \\
 \hline
 \cancel{00001111} \quad q = 00000000 \\
 + 11111001 \\
 \hline
 \cancel{00001000} \quad q = 00000001 \\
 + 11111001 \\
 \hline
 \cancel{00000001} \quad q = 00000010 \\
 + 11111001 \\
 \hline
 \cancel{00000001} \quad q = 00000011 = 3
 \end{array}$$

we can stop here since the remainder is less than divisor.
or

$$\begin{array}{r}
 00000001 \\
 + 11111001 \\
 \hline
 11111010 \rightarrow \text{negative result. Stop here} \\
 \text{but don't increase the quotient values.}
 \end{array}$$

Answer: Since it is a positive number

$$\begin{array}{l}
 q = 00000011_2 \\
 r = 00000001_2
 \end{array}$$

if this was
 $-21 \div 3 = -7$
 ↓

100x10

Multiply 01100100 by 00001111

The result will be in positive form.

$$\begin{array}{r}
 01100100 \\
 \times 00001111 \\
 \hline
 01100100 \\
 + 01100100x \\
 \hline
 100101100 \checkmark \\
 + 01100100xx \\
 \hline
 1010111100 \checkmark \\
 + 01100100xxx \\
 \hline
 010111011100
 \end{array}$$

↓

Answer: ~~000010111011100~~

000010111011100
