

## COURSE DESCRIPTION FORM

**INSTITUTION** National University of Computer and Emerging Sciences (NUCES-FAST)

**PROGRAM (S) TO BE EVALUATED** BS(CS)

### A. Course Description

(Fill out the following table for each course in your computer science curriculum. A filled out form should not be more than 2-3 pages.)

<b>Course Code</b>	EE227
<b>Course Title</b>	Digital Logic Design (DLD)
<b>Credit Hours</b>	3+1
<b>Prerequisites by Course(s) and Topics</b>	(EE117) Applied Physics
<b>Assessment Instruments with Weights</b> (homework, quizzes, midterms, final, programming assignments, lab work, etc.)	Mid-I: 15 Mid-II: 15 Assignments: 10 Project + Presentation : 10 Final: 50
<b>Course Coordinator</b>	Rabia Tabassum
<b>URL (if any)</b>	
<b>Current Catalog Description</b>	The goal of this course is to introduce concepts & tools for the design of digital electronic circuits using sequential and combinational logic to the freshmen computer science students.
<b>Textbook (or Laboratory Manual for Laboratory Courses)</b>	Digital Fundamentals , 11 <sup>th</sup> Edition, Floyd and Jain
<b>Reference Material</b>	1. Digital Systems Principles and Applications 8 <sup>th</sup> Ed, Tocci, Widmer and Moss 2. Digital Design by Moris Mano
<b>Course Goals</b>	<p><b>A. Course Learning Outcomes (CLOs)</b></p> <ol style="list-style-type: none"> <li>1. Identify and explain fundamental concepts of digital logic design including basic and universal gates, number systems, binary coded system, basic components of combinational and sequence circuits.</li> <li>2. Demonstrate the acquired knowledge to apply techniques related to the design and analysis of digital electronics circuits , including Boolean Algebra and Multi-variable Karnaugh</li> </ol>

	<p>map methods.</p> <p>3. Analyze small –scale combinational digital circuits.</p> <p>4. Design small-scale combinational and synchronous sequential digital circuit using Boolean Algebra and K-map.</p> <p>5. Familiarize with building blocks of a computer hardware design.</p> <p><b>B. Program Learning Outcomes</b></p> <p>For each attribute below, indicate whether this attribute is covered in this course or not. Leave the cell blank if the enablement is little or non-existent.</p> <table border="0"> <tr> <td data-bbox="527 766 738 829">1. Academic Education:</td> <td data-bbox="771 766 1388 808">To prepare graduates as computing professionals</td> <td align="right" data-bbox="1453 766 1485 808">✓</td> </tr> <tr> <td data-bbox="527 861 738 955">2. Knowledge for Solving Computing Problems:</td> <td data-bbox="771 861 1388 1050">Apply knowledge of computing fundamentals, knowledge of a computing specialization, and mathematics, science, and domain knowledge appropriate for the computing specialization to the abstraction and conceptualization of computing models from defined problems and requirements.</td> <td align="right" data-bbox="1453 861 1485 903">✓</td> </tr> <tr> <td data-bbox="527 1102 738 1165">3. Design/ Development of Solutions:</td> <td data-bbox="771 1323 1388 1480">Design and evaluate solutions for complex computing problems, and design and evaluate systems, components, or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.</td> <td align="right" data-bbox="1453 1323 1485 1365">✓</td> </tr> <tr> <td data-bbox="527 1533 738 1606">5. Modern Tool Usage:</td> <td data-bbox="771 1533 1388 1669">Create, select, adapt and apply appropriate techniques, resources, and modern computing tools to complex computing activities, with an understanding of the limitations.</td> <td></td> </tr> <tr> <td data-bbox="527 1722 738 1795">6. Individual and Team Work:</td> <td data-bbox="771 1722 1388 1816">Function effectively as an individual and as a member or leader in diverse teams and in multi-disciplinary settings.</td> <td align="right" data-bbox="1453 1722 1485 1764">✓</td> </tr> <tr> <td data-bbox="527 1900 738 1942">7. Communication:</td> <td data-bbox="771 1879 1388 1942">Communicate effectively with the computing community and with society at large about complex</td> <td></td> </tr> </table>	1. Academic Education:	To prepare graduates as computing professionals	✓	2. Knowledge for Solving Computing Problems:	Apply knowledge of computing fundamentals, knowledge of a computing specialization, and mathematics, science, and domain knowledge appropriate for the computing specialization to the abstraction and conceptualization of computing models from defined problems and requirements.	✓	3. Problem Analysis:	Identify, formulate, research literature, and solve complex computing problems reaching substantiated conclusions using fundamental principles of mathematics, computing sciences, and relevant domain disciplines.		4. Design/ Development of Solutions:	Design and evaluate solutions for complex computing problems, and design and evaluate systems, components, or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.	✓	5. Modern Tool Usage:	Create, select, adapt and apply appropriate techniques, resources, and modern computing tools to complex computing activities, with an understanding of the limitations.		6. Individual and Team Work:	Function effectively as an individual and as a member or leader in diverse teams and in multi-disciplinary settings.	✓	7. Communication:	Communicate effectively with the computing community and with society at large about complex	
1. Academic Education:	To prepare graduates as computing professionals	✓																				
2. Knowledge for Solving Computing Problems:	Apply knowledge of computing fundamentals, knowledge of a computing specialization, and mathematics, science, and domain knowledge appropriate for the computing specialization to the abstraction and conceptualization of computing models from defined problems and requirements.	✓																				
3. Problem Analysis:	Identify, formulate, research literature, and solve complex computing problems reaching substantiated conclusions using fundamental principles of mathematics, computing sciences, and relevant domain disciplines.																					
4. Design/ Development of Solutions:	Design and evaluate solutions for complex computing problems, and design and evaluate systems, components, or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.	✓																				
5. Modern Tool Usage:	Create, select, adapt and apply appropriate techniques, resources, and modern computing tools to complex computing activities, with an understanding of the limitations.																					
6. Individual and Team Work:	Function effectively as an individual and as a member or leader in diverse teams and in multi-disciplinary settings.	✓																				
7. Communication:	Communicate effectively with the computing community and with society at large about complex

<b>Topics Covered in the Course, with Number of Lectures on Each Topic</b> (assume 15-week instruction and one-hour lectures)	<div> <b>1. Topics to be covered:</b> </div> <div> <div>List of Topics</div> <div>No. of Weeks</div> <div>Contact Hours</div> <div>CLO</div> </div> <div>           Chapter-1 : Introduction. Digital Electronics. Digital Principles. Analog Vs. Digital. Basic Logic operations.         </div> <div>           Chapter-2 :         </div> <div>           Number Systems, Decimal-to-Binary         </div>

	Conversion, Binary Arithmetic, Complements of Binary Numbers, Signed Numbers, Arithmetic Operations with Signed Numbers, Hexadecimal Numbers, Octal Numbers, Binary Coded Decimal (BCD), Error Codes The Byte, Nibble and Word.	2	6	1
	Chapter-3: Logic Gates, AND OR & NOT Gates, NOR NAND XOR Gates.			
	Chapter-4: Boolean Algebra and logic simplification. DeMorgan's Theorems. Boolean analysis of Logic circuits. Truth Tables. The Karnaugh Map.	2	6	2
	Chapter-5 : Basic Combinational circuits. Implementing Combinational Logic. Using NAND and NOR Gates.	1	3	3
	===== MID 1 =====			
	Chapter -6: Basic Adders. Parallel Binary Adders. Comparators. Decoders. Encoders. Multiplexers. Demultiplexers.	2	6	3
	Chapter-7 : Latches. Edge-Triggered Flip-Flops. Flip-Flop Operating Characteristics. Flip-Flop applications.	2	6	4
	===== MID 2 =====			
	Chapter-9: Asynchronous Counters. Synchronous Counters. Cascaded Counters. Counter Decoding.	2	6	4
	Chapter -8 : Basic Shift Register Operations. Serial In/Serial Out Shift Registers. Serial In/Parallel Out and Parallel In/Parallel Out Shift Registers. Bidirectional Shift Registers.			
	Chapter -11 Memory Basics, the Random-Access Memory. The Read-only Memory. Programmable ROM. The Flash Memory. Memory Expansion. Special Types of Memories. Magnetic & Optical Storage.	2	6	4,5
	Review	1	3	2,3,4

Natio

	Project Presentations	1	3	1,2,3,4,5
	Total	15	45	
<b>Laboratory Projects/Experiments Done in the Course</b>				
<b>Programming Assignments Done in the Course</b>				
<b>Class Time Spent on (in credit hours)</b>	<b>Theory</b>	<b>Problem Analysis</b>	<b>Solution Design</b>	<b>Social and Ethical Issues</b>
	30	10	5	0
<b>Oral and Written Communications</b>	Every student is required to submit at least <u>  1  </u> written report of typically <u>  2  </u> pages and to make <u>  1  </u> oral presentations of typically <u>  10  </u> minute's duration. Include only material that is graded for grammar, spelling, style, and so forth, as well as for technical content, completeness, and accuracy.
